

Computer Short Course (CSC) – Lodhran Public School

Information Technology is the future with the world rapidly turning into a Global Village. The future belongs to countries who excel in digitalized institutions and research in IT.

TEF – keeping the needs in mind – in this summer has provided students of Lodhran an opportunity of CSC. The duration of CSC would be 10 weeks and no fee would be charged. The professional and dedicated teachers of TEF are introducing students to latest practices in the field of IT.

THE CSC has been designed using an unorthodox approach with major focus on practical instead of abstract syllabus. The lab is designed to cater 34 students at a time, and provided with the multimedia projector.

At the time, 162 students are attending the CSC – and these are divided in 5 sections. On successful completion of the course, students would be awarded with Certificate of Completion with a chance to win cash prizes and gift hampers.

TEF aims to ensure – using the best resources at its disposal – that this professional training would enable students to step in the field of IT.
